Matt J. Jarvis

LOFAR & H-ATLAS Collaborations

European Week of Astronomy and Space Science 2015

La Laguna, Tenerife, Spain

22-26 June, 2015

OUTLINE

- Introduction & motivation
- Observations and data
- Results

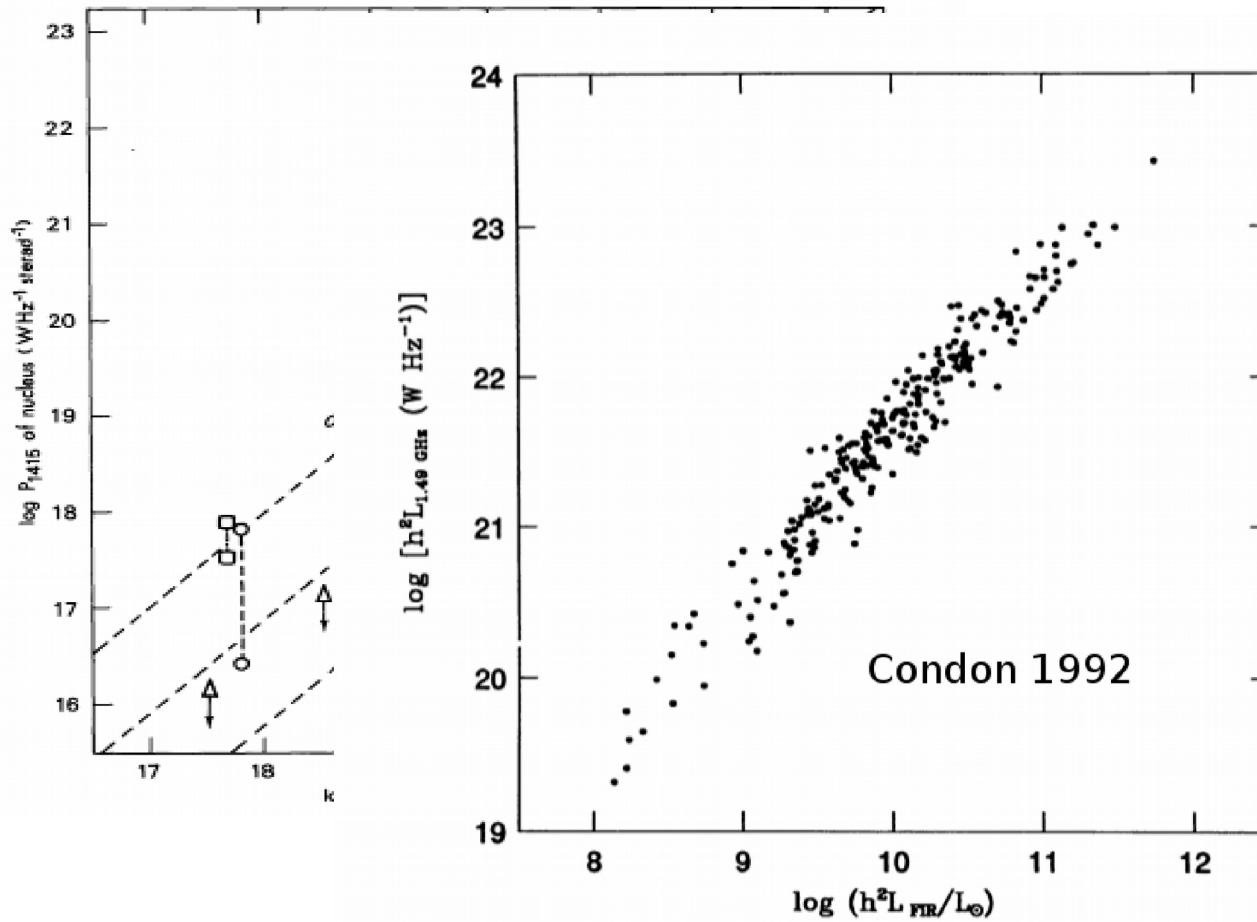

FAR-IR - RADIO CORRELATION

Far-IR → re-processed UV light from young stars

Synchrotron → cosmic ray electrons accelerated by SNs

FAR-IR - RADIO CORRELATION

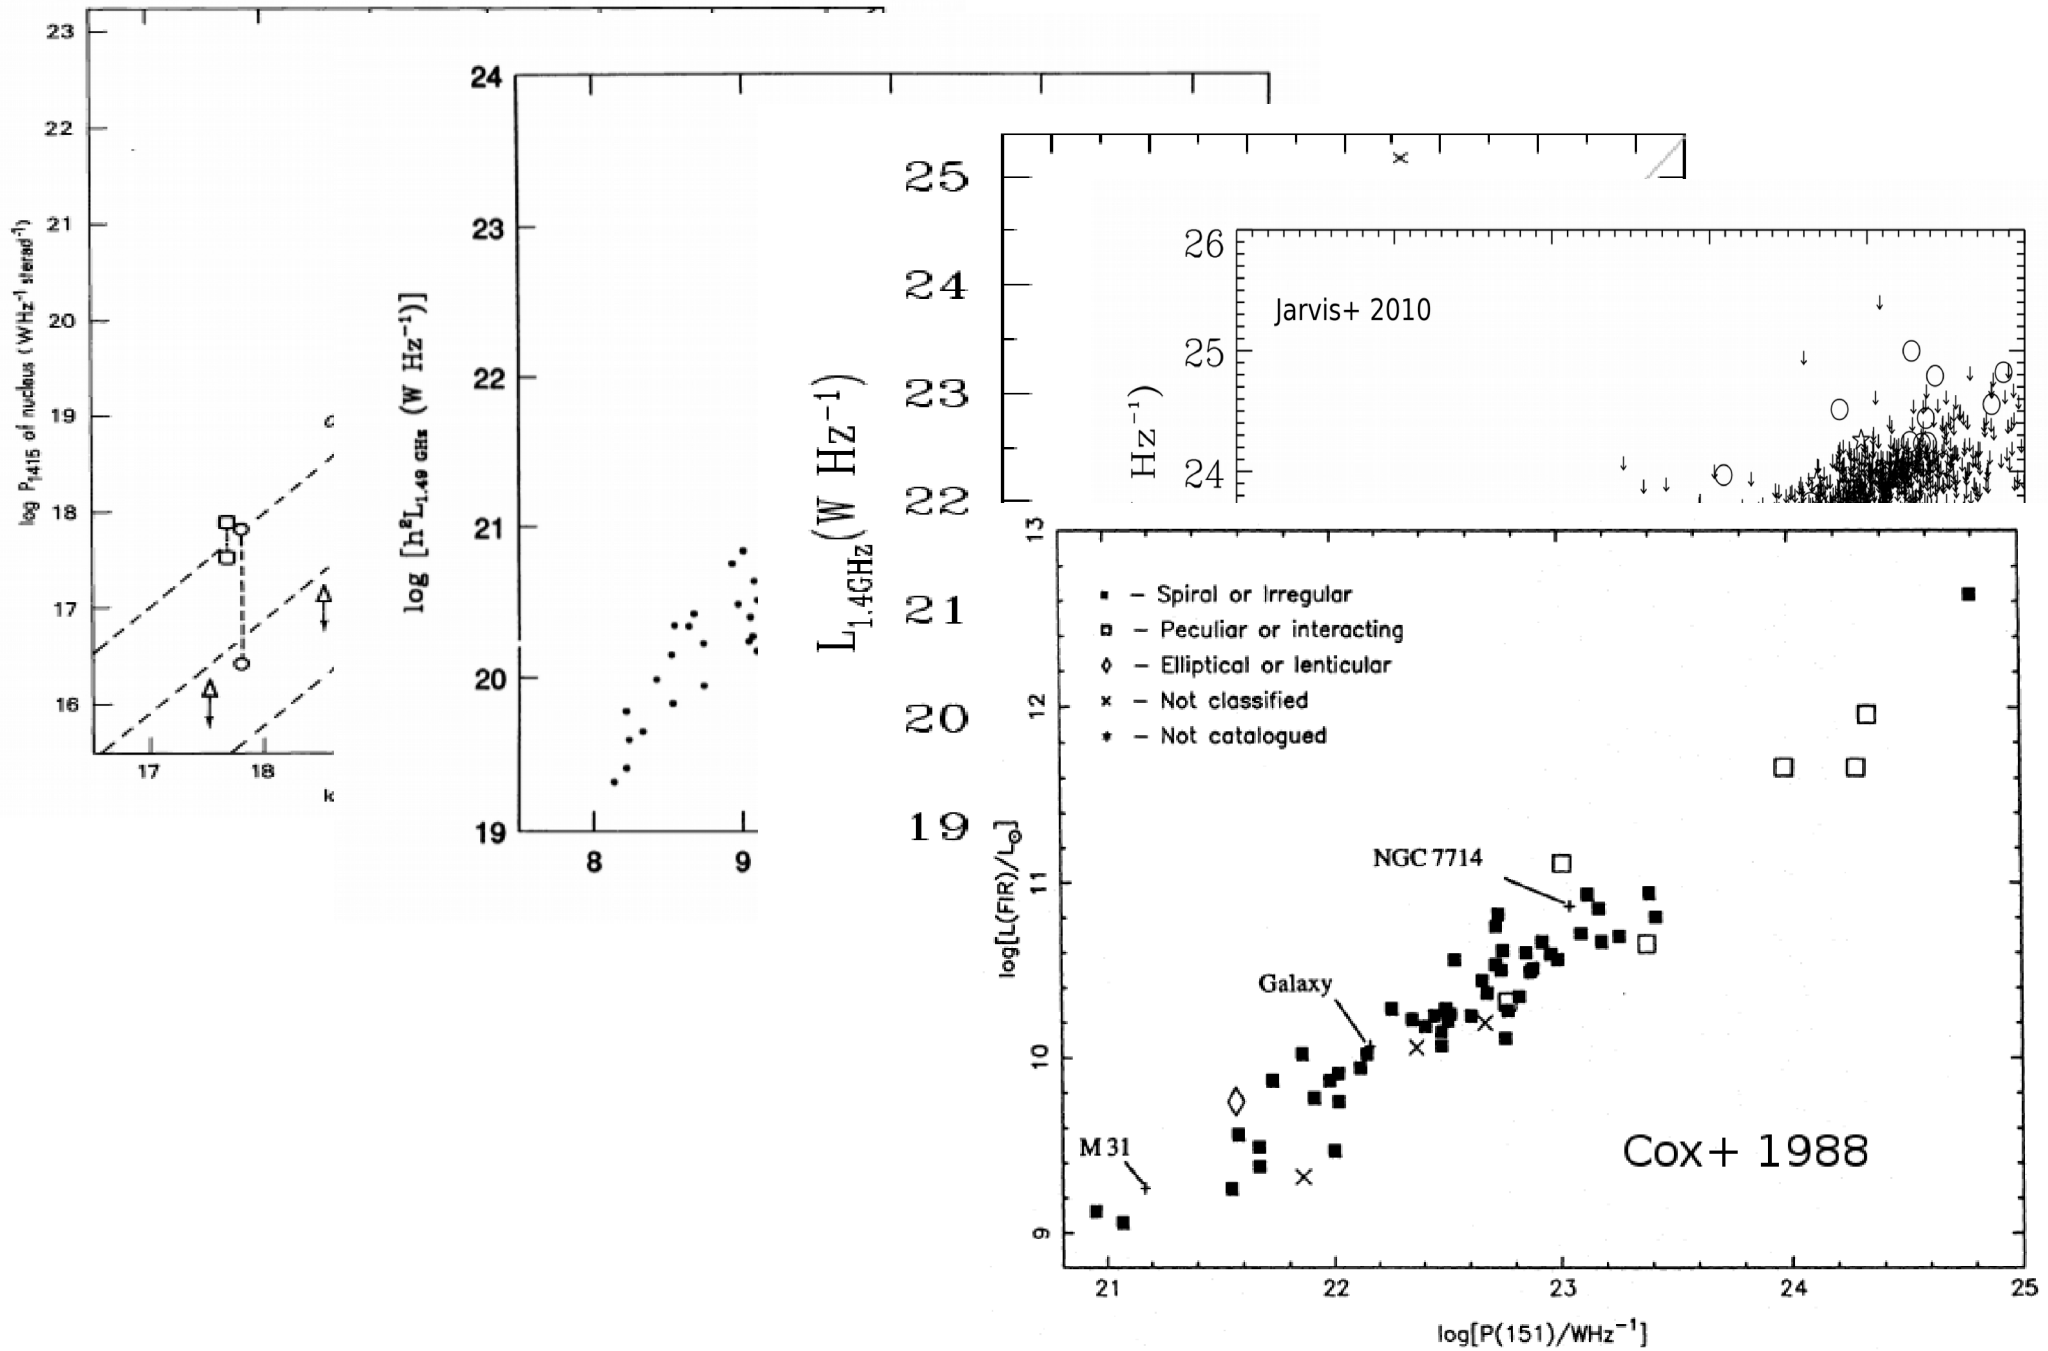

FAR-IR - RADIO CORRELATION

FAR-IR - RADIO CORRELATION

FAR-IR - RADIO CORRELATION

MOTIVATION

LOW-FREQUENCY RADIO AS SFR INDICATOR?

Almost all studies are @ GHz bands

Longer lifetimes of radiating electrons @ low-frequencies

Advantages:

Herschel and optical data → star-formation rate

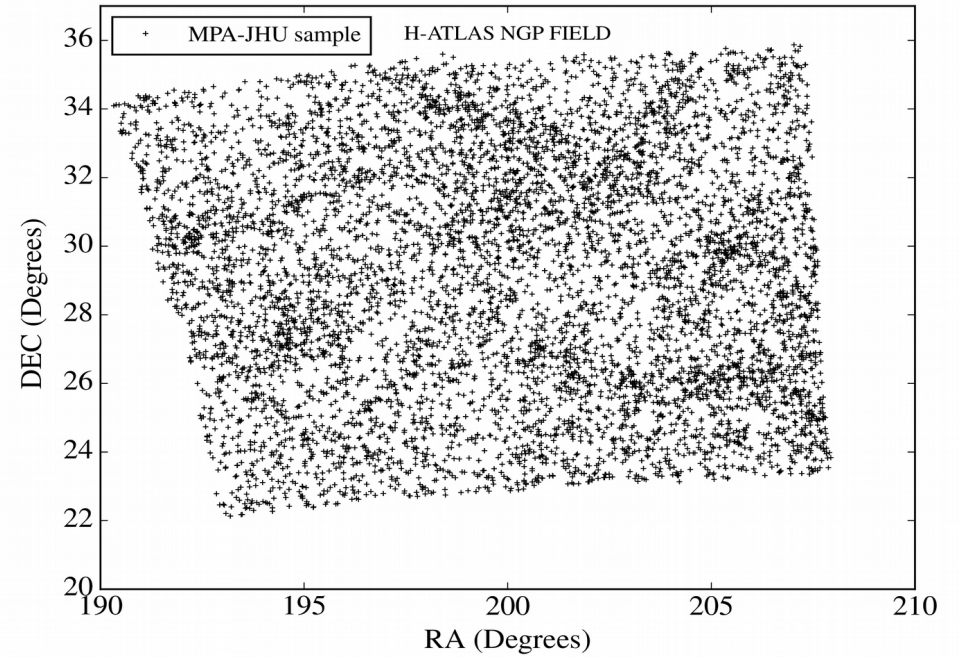

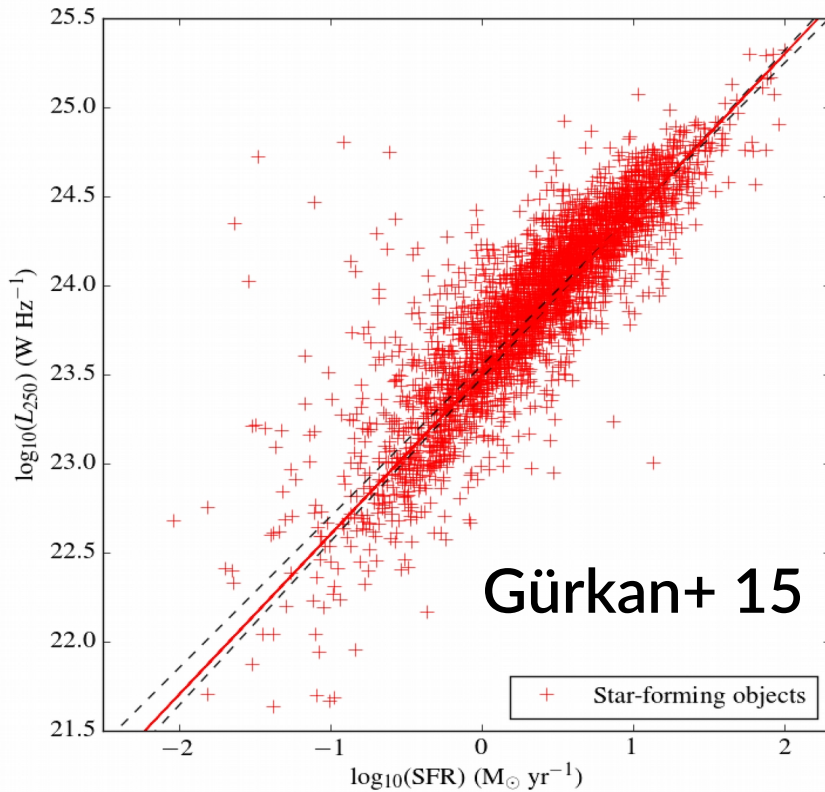

Low-frequency radio data @ 150MHz from LOFAR

Sample and Data

MPA-JHU Sample

Star-forming objects (8035),
Composite objects (2490), Seyferts
(1190), Radio-loud AGN (613)

Herschel 250- μm flux densities
 $\text{H}\alpha$ star formation rates

LOFAR

LOW-Frequency ARray

Low-HBA Observations

Frequency range 110-180 MHz

Ionosphere!!!

62 antennas (Core and remote stations)

Each band (10 sub-bands) has 40 channels → 55GB

~10 min int. → the calibrator, ~8 hr obs. → the source

- Flagging each sub-band for bad channels
- Directional Clock & TEC (ionosphere) calibration
- Self-amp.&-phase calibration, facet-imaging, subtraction of sources and re-imaging

Stacked final map has 10"x5" resolution

LOFAR DATA

LOFAR DATA

LOFAR DATA

RMS noise sensitivity $\sim 130\mu\text{Jy}$

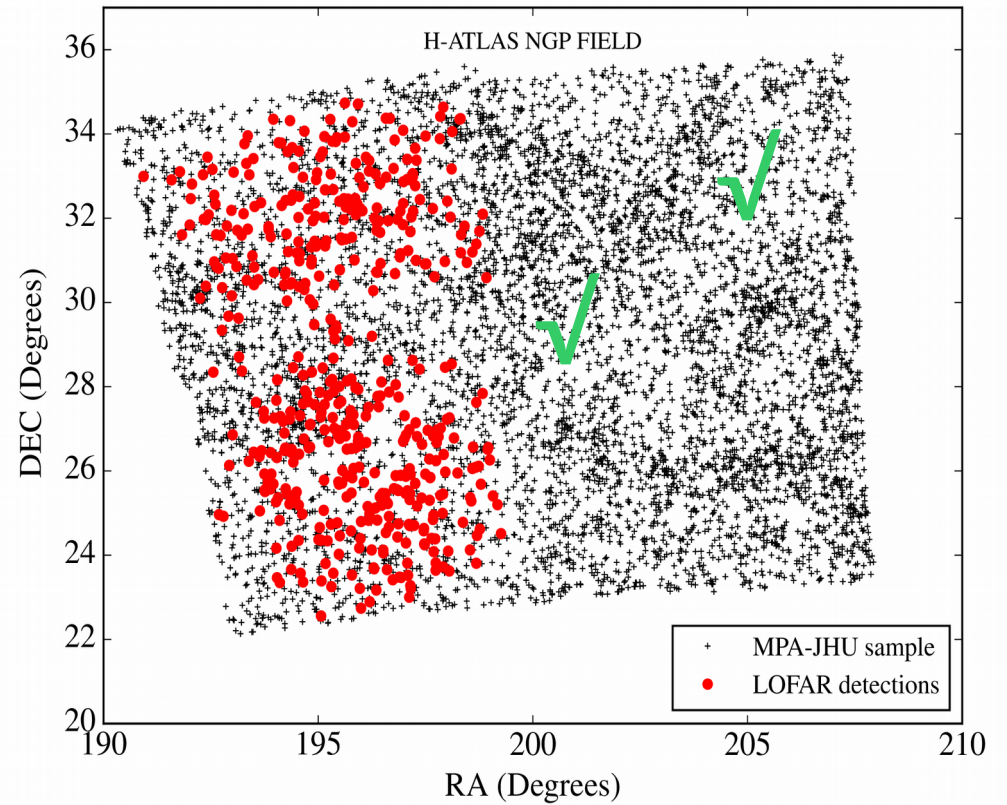

LOFAR DATA

DATA & OBSERVATIONS

MPA-JHU Sample

Star-forming objects 8035
Composite objects 2490
Seyfert galaxies 1190
Radio-loud AGN 613

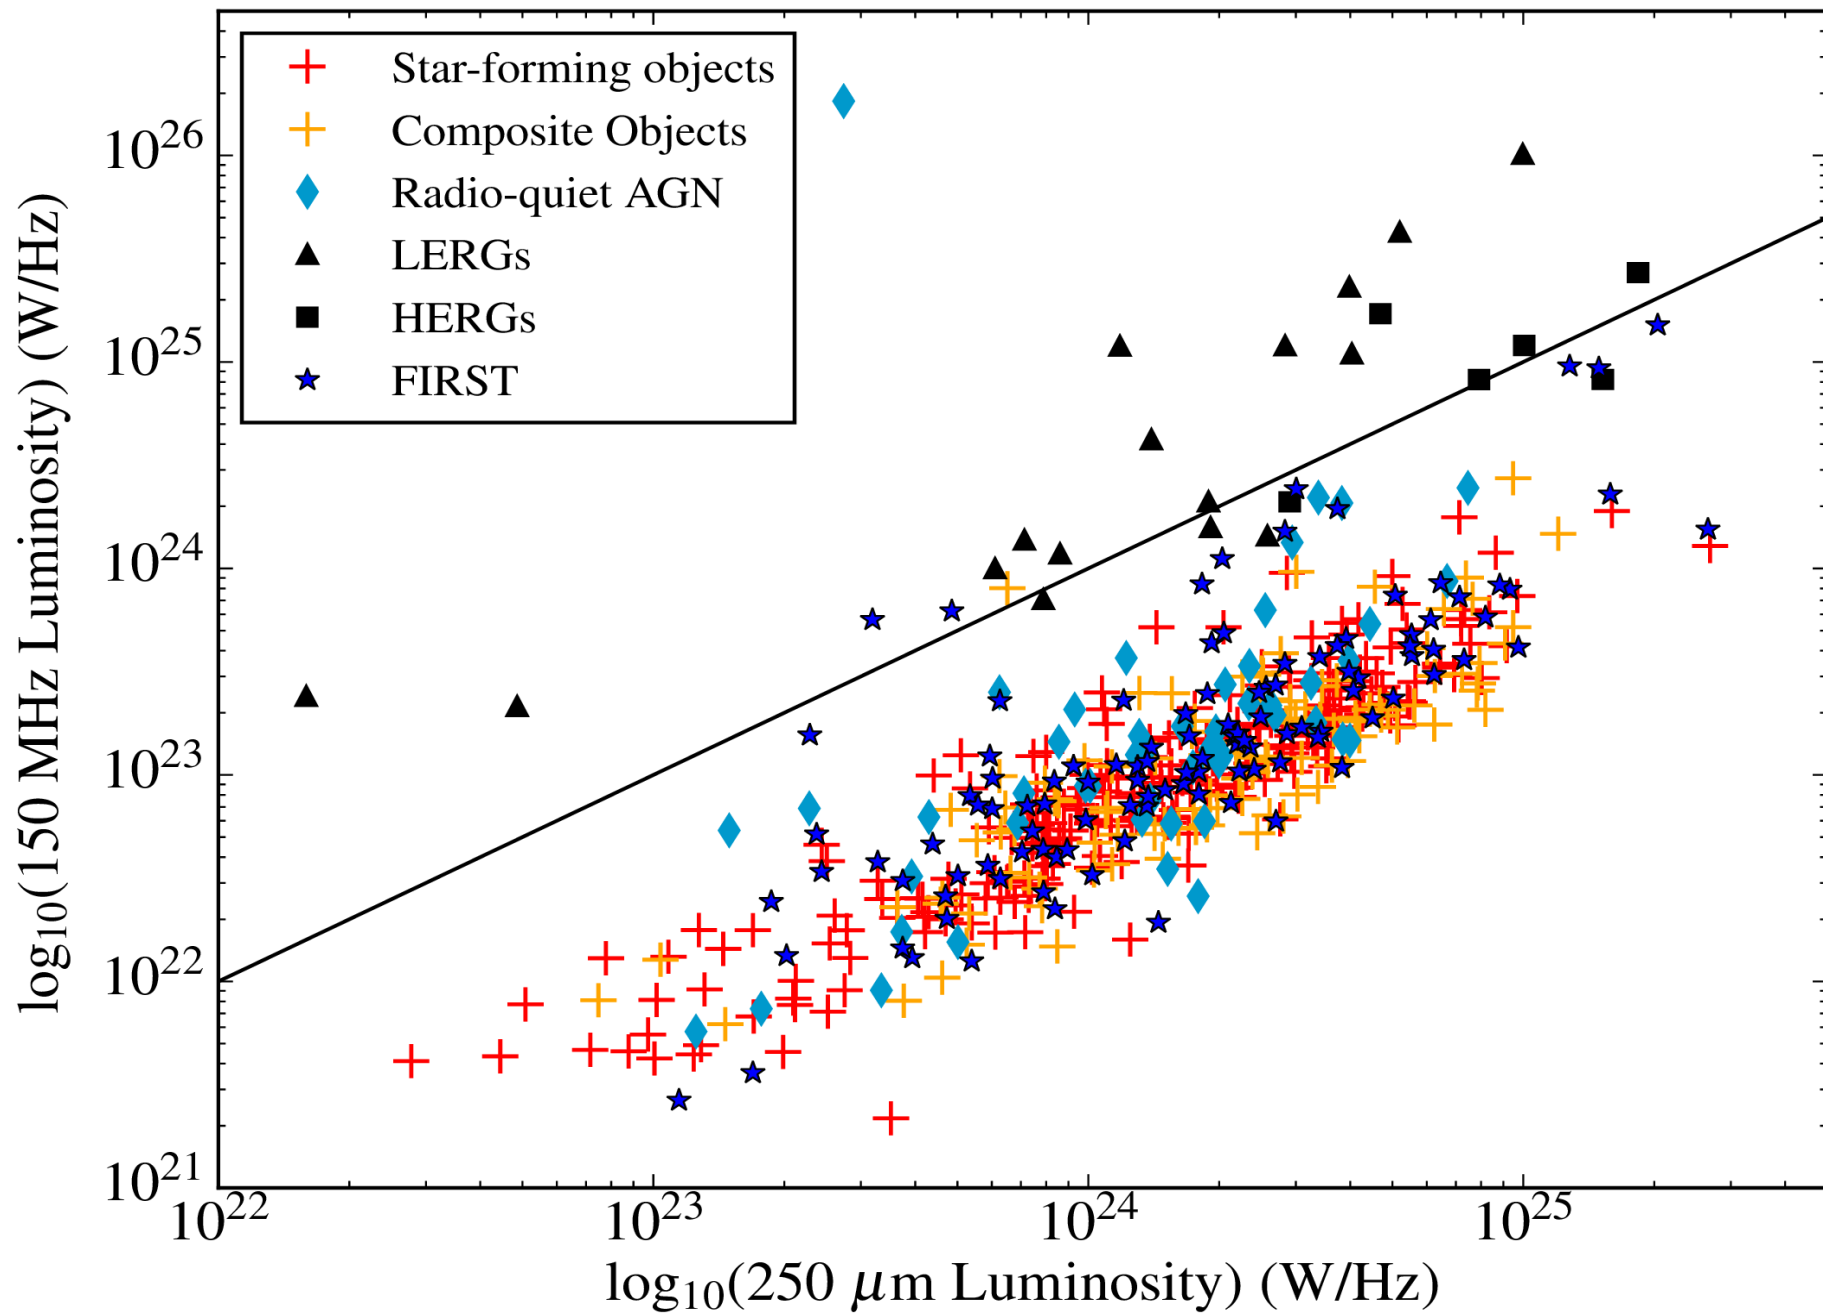

LOFAR detection rate:

Star-forming objects 232
Composite objects 106
Seyfert galaxies 52
Radio-loud AGN 99

LOFAR / FAR-IR

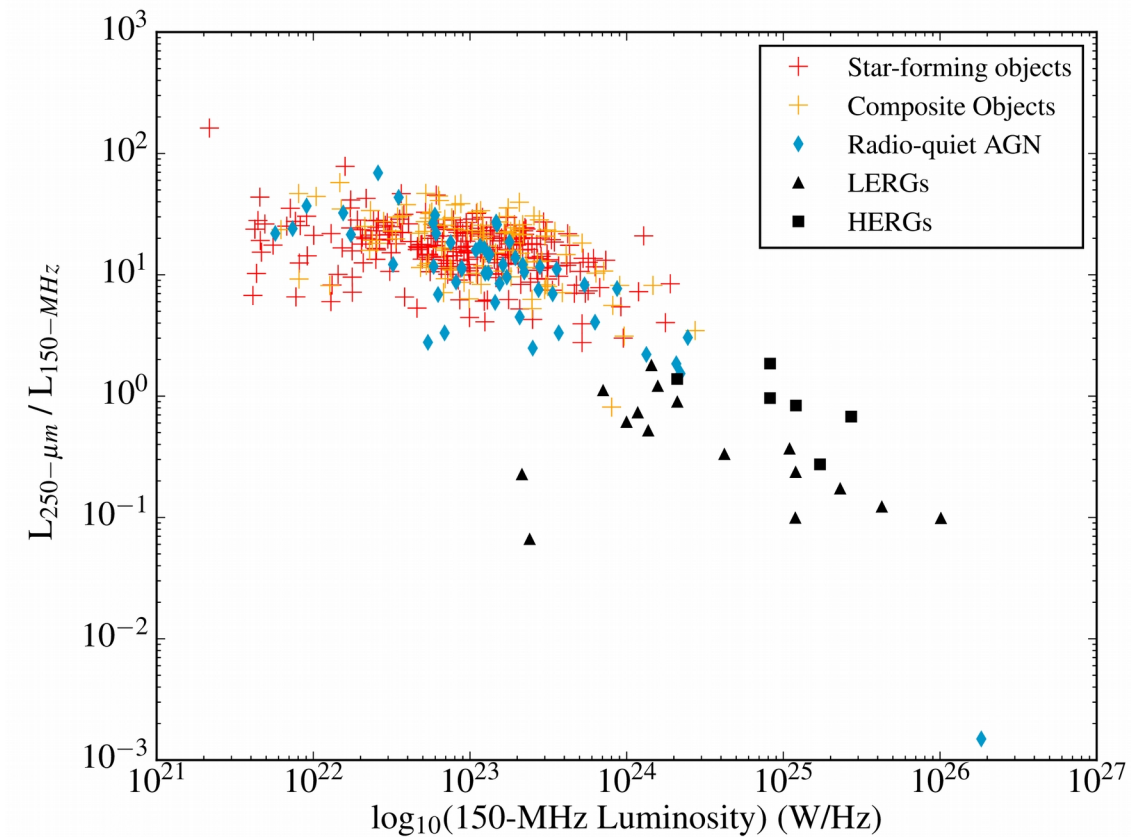

LOFAR / FAR-IR

LOFAR / SFR- $H\alpha$

← $q_{FIR} / L_{150-MHz}$

$q_{FIR} / L_{250-\mu m}$ →

FUTURE PROSPECTS

- More sources – remaining 2 fields
- Estimating the relations between SFR and 150-MHz luminosity
- Measuring LOFAR flux for each source in the parent sample
- Stacking 150-MHz luminosities as a function of their SFRs

KEY TAKE AWAY MESSAGE !

RADIO / FAR-IR RELATION

We do not see any difference
@ low radio frequencies!

KEY TAKE AWAY MESSAGE !

RADIO / FAR-IR RELATION

We do not see any difference
@ low radio frequencies!

LOFAR data

More sensitive and deeper than FIRST!

BUT...

**KEEP
